

openZEVX™ is a Fleet Management Software as a Service (SaaS) Platform, delivered via a web portal, mobile app, or API

OPTIMIZE YOUR FLEET WITH REAL-TIME MONITORING & ANALYTICS

What is openZEVX?

The superior choice for those who want an open platform that is vehicle agnostic, providing insight into & management of fleet operations

Who was openZEVX designed for?

Fleet Managers, Dispatchers, Service Team, Finance, Safety Managers, Drivers, & the C-Suite. Our platform is specifically optimized for electric vehicles (EV), allowing managers to maximize the efficiency & lifespan of their EV fleet

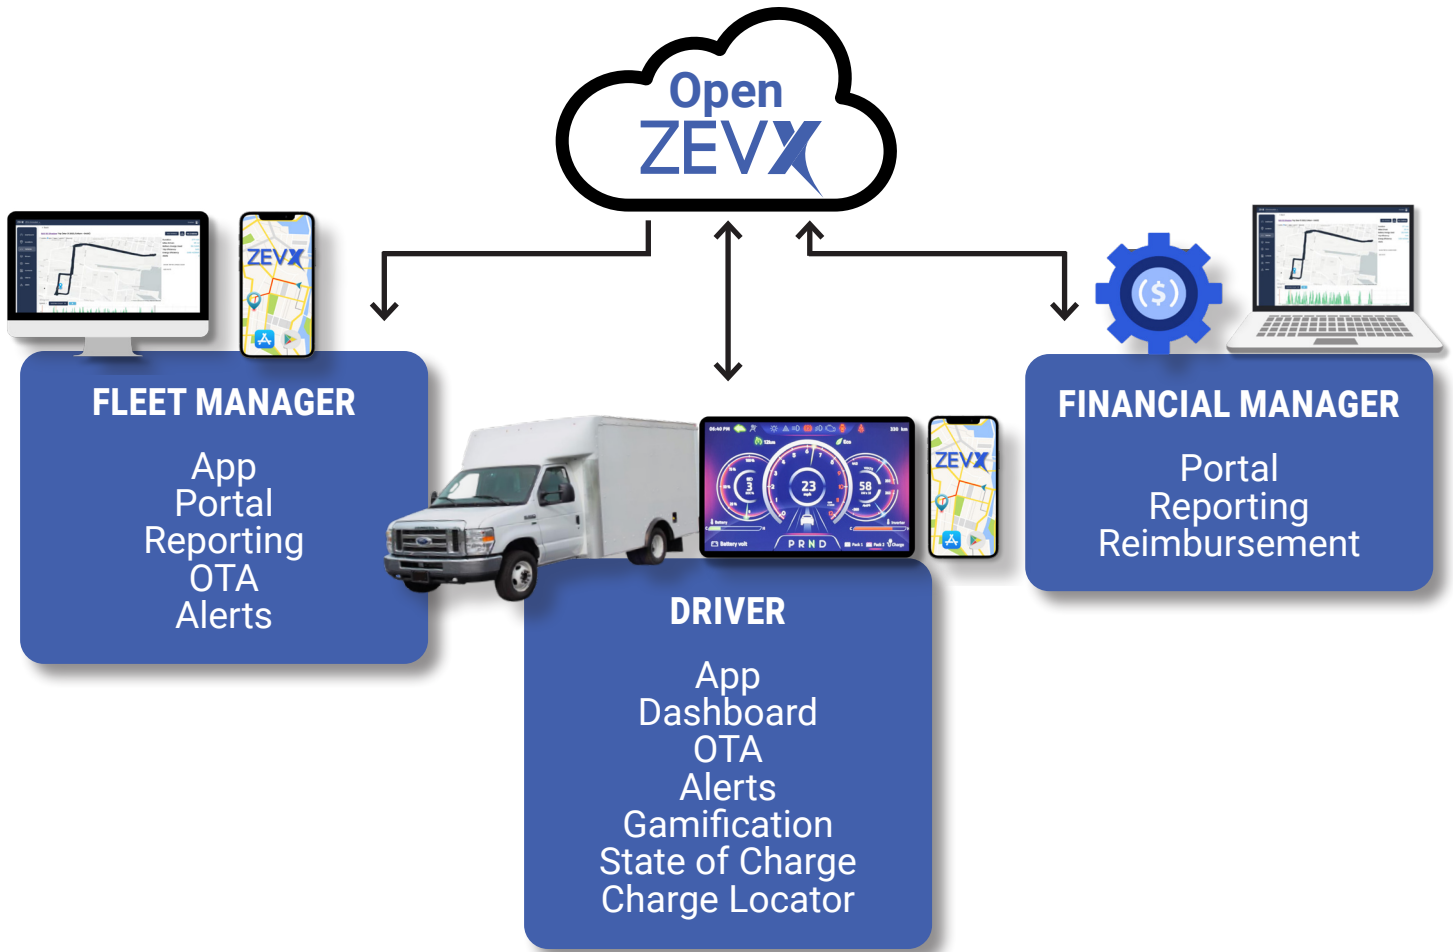

What are the features of openZEVX?

Telematics / Route Tracking:	Telematics data tracks the location, speed, & performance of EVs in real-time for efficiency and safety
Driver Performance Options:	Providing fleet managers with performance options, such as eco-driving mode, regenerative braking, & charge management, helps optimize driving & reduce energy consumption
Vehicle Health Analysis & Recommendations:	Monitoring the health of the EV fleet provides insights into potential maintenance issues before they become critical, maximizing vehicle uptime and reducing maintenance costs
Vehicle Charging Expense Reporting:	Fleet managers can track & report on the charging expenses of each vehicle, including outside of the depot, to reimburse drivers for their charging costs
Fleet Manager Mobile App:	With the mobile app, fleet managers can manage their fleet from anywhere, including vehicle monitoring & driver communication
API Access:	Third-party developers can access the data & functionality of the EV fleet management software through an application programming interface (API), enabling integration with other software and tools
OTA Updates:	Over-the-air (OTA) updates remotely install for new features, bug fixes, & security patches, saving time & money without requiring the vehicle into a service center for manual updates
